National Institutes of Health

FOREWORD

This bibliography presents a comprehensive listing of scientific and technical papers published by staff members of the National Institutes of Health during 1956.

It is prepared for scientists within and outside the National Institutes of Health, as well as for interested lay persons, to furnish a synoptic picture of direct research performed by NIH scientists at Bethesda and in the field. The titles—arranged by Institute and Division, alphabetically within the Laboratories—suggest the range of the research endeavor of each Institute. Together, the studies reflected in these publications constitute a many-faceted approach to the major problems facing the medical and biological sciences today.

James A. Shannon

JAMES A. SHANNON, M. D.,
Director, National Institutes of Health.

★ ★ ★

Each entry in this bibliography has been made under the name of the senior author. There has been no cross reference under names of junior authors. In future editions cross references and an authors' index will be provided so that the papers reflecting collaborative work of scientists of different organizational units will be more apparent.
